Running a Simpack Simulation

You can run a Simpack simulation on the cloud.

See the Simpack documentation for more information on preparing a Simpack model and transferring it to the cloud.

Before you begin: Create a Simpack simulation.

Retrieving Simpack Simulation Results

1. From Simpack, save the simulation to the **3D**EXPERIENCE platform.

   For more information, see the Simpack documentation.
2. From a dashboard, open Simulation Manager.
3. From the simulations panel on the left, select the Simpack simulation.
4. From the toolbar in the details panel or the simulations panel, click **Run**.

   Tip: You can also right-click the `.sjs` file, and click **Run**.

   Run configuration information for a Simpack simulation appears.
5. From the **License** options, select one of the following:

Option	Description
Tokens	Licensing items that are checked out from the license pool to run the simulation and then returned when it is complete.
Credits	One-time consumable licensing items.

   For more information about tokens and credits, see Simulation Licensing.
6. Specify the **Configuration** for computing the simulation.
7. Click **Run**.

   Simulation Manager submits a simulation job for the Simpack simulation to run on the cloud. You can use the **Monitor** tab to view log files while the simulation is running.
