About Visualization Types

Adding a New Visualization

Managing Visualizations

The **Visual Analytics** page provides a canvas for data visualizations of your results. These visualizations include charts, graphs, and tables.

1 Filters Panel

2 Tabs

3 Alternatives Information Area

4 Canvas

5 Visualization Controls

6 Properties Panel

Filters Panel

Results Analytics provides several tools for filtering out data points that will not be considered for a recommended alternative. Filtering out unwanted data points helps to give you a clearer picture of your data set and a better understanding of the remaining alternatives. You can show or hide the **Filters** panel to provide more room for the canvas.

Tabs

Tabs allow you to organize your visualizations in different sheets and navigate between these sheets. Double-click to rename a tab; click and then **Delete** to delete the tab and all visualizations within it.

Alternatives Information Area

This area displays the number of alternatives selected and shown in the **Properties** panel, the number of alternatives shown in the visualizations on the canvas, the number of alternatives in the basket, and the number of recommended alternatives.

Canvas

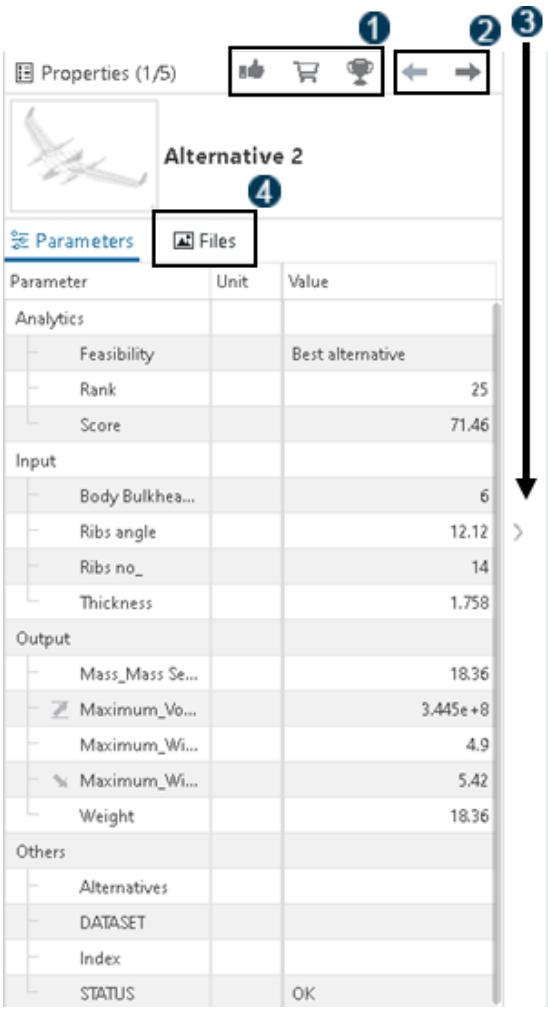

The canvas is where the visualizations appear. You can resize and drag each visualization to move it on the canvas.

Visualization Controls

You can use the visualization controls to create a new visualization, manage the selected alternatives, and alter the view of visualizations on the canvas. You can arrange visualizations in one, two, or three columns to best fit your window size.

Properties Panel

You can view the parameters and files for each alternative from the **Properties** panel. The **Properties** panel shows parameter values and images for the current selected design.

1 You can **Like**, **Add to basket**, or **Recommend** an alternative. For more information, see Annotate, Like, and Recommend a Data Point.

2 You can navigate between selected designs from the arrows at the top of the **Properties** panel.

3 You can show or hide the **Properties** panel to provide more room for the canvas.

4. You can access controur plots from the **Files** section of the propertiers panel, as shown below.
