About Parallel Coordinate Plots

1. From the visualization controls in the upper right of the Visual Analytics canvas, click **New Visualization**  .
2. Select **Parallel Coordinates**.
3. Enter a **Title** and **Description**.
   The title appears on the visualization when it is added to the canvas.
4. Select up to ten parameters to measure.
5. **Optional:** Select a parameter to set the color of data points in the plot.
6. Do one of the following:
   - Click **Create and Close** to create the new visualization and to return to the canvas.
   - Click **Create** to create the new visualization and to keep the new visualization window open.
7. Click on a data point to display more information in the **Properties** panel.

   Tip: You can hold **Shift** to select multiple bars.
